## PROJECT

### Secure fileX: A comprehensive file security Application (ongoing)

Developed a robust file security application as a final year project, utilizing HTML, CSS, and JavaScript for the frontend, and Python for the backend. The application features advanced encryption techniques to protect sensitive data, user authentication for enhanced security, and a user-friendly interface for efficient file management.

### Brain tumor classification using Machine Learning

Developed a machine learning model to classify brain tumors as part of an undergraduate project. Utilized Python as the primary programming language to implement various algorithms for accurate tumor detection and classification. The project involved preprocessing MRI images, feature extraction, and training models to distinguish between different types of brain tumors, enhancing diagnostic accuracy and aiding in early detection.
